

There for You During All Plant Lifecycle Phases

Produce with Peace of Mind. We'll Take Care of the Safety.

The safety and availability of your industrial plant are your top priorities. To ensure these requirements are maintained throughout all phases of the plant lifecycle, you can draw on the support of experienced safety experts in the HIMA Safety Services team. This enables you to fully focus on your core business.

Challenges

Your plants should be efficient and productive 24/7. At the same time, during all phases of the plant lifecycle, you need to ensure that protection systems are state of the art and comply with strict safety standards. Any fault in a protection system can lead to unplanned downtime – or even a critical failure with catastrophic consequences. To avoid this, specially trained staff need to take care of the safety solution and ensure the technology always functions reliably as designed. This is a time-consuming and costly challenge that diverts employees' focus from their real priority: efficient production.

Solution

Let the experienced safety experts from HIMA take on these tasks. You decide on the level of support you require. This includes up to the agreement for the complete lifecycle. We offer on-site support for the safety concept analysis and specification. Then we take care of the technical planning of the solution and the integration into your plant. This includes on-site installation of the safety systems, seamless commissioning, and operational support. We can also make the necessary

adjustments for modernization or modification of your plant. In addition, we can support you with preventive maintenance. As part of this service, we inspect and optimize your system at defined maintenance intervals, replace consumables, and thus prevent unexpected failures.

In many countries, HIMA experts can assist you with 24/7 support services. Our experts rapidly identify and resolve your issues either via remote diagnostics, telephone support, or on-site inspection. When required, we will also deliver replacement parts immediately.

Advantages

Every company faces its own challenges. You should therefore choose services tailored to your specific needs. Support from qualified specialists ensures that your protection systems are always up to date, that you comply with current safety standards, and that you have the necessary expertise. You prevent unnecessary downtime and reduce plant lifecycle costs. Your systems are guaranteed to stay reliable, available, and productive. This saves you money and gives you the peace of mind to fully focus on your core business.

“There is always a service employee available whenever we have a request. The HIMA team works quickly and flexibly – we've appreciated that for many years.”

Michael Brendelberger
Functional Safety Planning
BASF SE

+ Benefits

- **Productive:** Minimize downtime and operate your plants more profitably.
- **Efficient:** Let certified safety experts take care of your safety processes – and free up time to focus on value-adding tasks.
- **Standard-compliant:** The services help you reliably comply with all safety standards.
- **Tailored:** Choose services as required or outsource your entire lifecycle planning.
